

How to Use iMovie

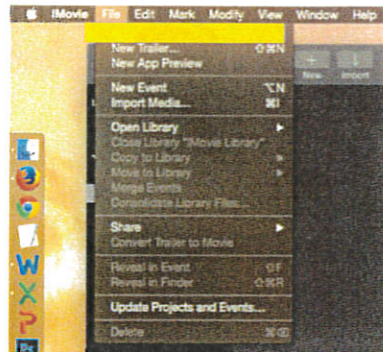

1  Go to File then New Movie

Or

New

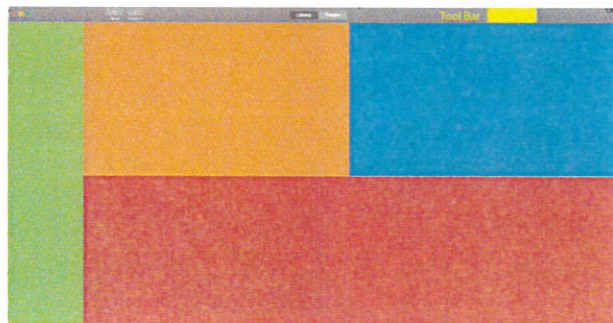

and then

Left-Click on a Theme you want

Basic Overview of Interface

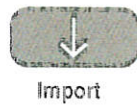

Browser Pane: Displays the content in your library depending on which library is currently being selected.

Project Pane: For assembling your movie. You may select portions of a clip from the Browser pane and add to your project. You can also add special effects such as transitions, titles, or music to your project in this pane.

Viewer Pane: When you select a media item in the Browser pane, information about the item will appear in the Viewer. This is also where you can edit media by using the tools provided in the toolbar (Enhance or Adjust).
